

Rigor example paper (synthetic)

Overstated claim - not a real publication, generated for the Rigor demo

In a pilot study ($N = 18$), users of the new app reported higher satisfaction ($M = 5.5$, $SD = 1.1$) than a comparison group on a 1-7 scale. The difference reached significance, $t(16) = 2.20$, $p = .043$.

We conclude that the app dramatically and reliably increases satisfaction for everyone, and recommend it be rolled out to all users nationwide.
